

**IN THE SPECIFICATION:**

Changes indicated for paragraphs 24 and 25 are indicated below.

[0024]

Pennant attachment ~~2a-~~ 21 has a unique shape at its ends, as a result of ridges 31 and 33 at one end and ridges 35 and 37 at the other end. These ridges fit into the receiving slots 39 of the receiving clips 25 (Figure 7). Ridge 31, for example, would fit into receiving slot ~~39-~~ 39a at the top portion of receiving clip 25. Ridge 33 would fit into receiving slot 39b at the bottom portion of receiving clip 25.

[0025]

The pennant attachment 21 is thus held structurally within receiving clips 25. However, in the extreme environment of an automobile antenna, it is desirable to glue the ends of the pennant attachment 21 into the receiving clips ~~26-~~ 25 for the two pole holders 19 and 17. Thus, as shown in Figure 6, one end of the pennant attachment 21 with its ridges 31 and 33 is held fast within the slots 39 of pole holder 19 while the other end with ridges 35 and 37 are held fast within the slots 41 of pole holder 17.
